[Glasgow Coma Scale Chart](#)

Table 7: The Glasgow Coma Scale (GCS)

	Response	Score points
Eye opening	Spontaneously opens eyes	4
	Opens eyes to verbal command	3
	Opens eyes to painful stimulus	2
	Does not open eyes to pain	1
Verbal response	Completely orientated	5
	Confused conversation	4
	Inappropriate words	3
	Incomprehensible sounds	2
	No verbal response	1
Motor response	Obeys commands	6
	Localizes to pain	5
	Withdraws to pain	4
	Abnormal flexion (decorticate rigidity)	3
	Abnormal extension (decerebrate rigidity)	2
	No response (Flaccid)	1

Score = eye opening points + verbal response points + motor response points.

Total possible points = 15, Coma = 8, worst score = 3

---

Validity of the FOUR score coma scale in the medical intensive care unit A person is assessed against the criteria of the scale, and the resulting points give a person's score between 3 (indicating deep unconsciousness) and either 14 (original scale) or 15 (more widely used, modified or revised scale).. The original scale was a 14-point scale, omitting the category of abnormal flexion.. Emergency Nurse 14 (8): 305 PMID 17212177 A comparison of the Glasgow Coma Scale score to simplified alternative scores for the prediction of traumatic brain injury outcomes.

Ann Emerg Med 45 (1): 3742 PMID 15635308 Annals of Emergency Medicine PMID 21803447.. g E1c, where c closed, or V1t where t tube) This would mean, for example, eyes closed because of swelling 1, intubated 1, leaving a motor score of 3 for abnormal flexion.. Not to be confused with the awakening of a sleeping person; such people receive a score of 4, not 3.

Glasgow Coma Scale Chart Serial Assessments OfThe initial indication for use of the GCS was serial assessments of people with traumatic brain injury and coma for at least six hours in the neurosurgical ICU setting, though it is commonly used throughout hospital departments.. Random or exclamatory articulated speech, but no conversational exchange Hence, the score is expressed in the form GCS 9 E2 V4 M3 at 07:35.. It was decided that several things required updating, like the Eye Response element, meaning that instead of responding to Painful Stimuli being regarded as a 2, a person that opens their eyes in response to pressure is now considered a 2 in the Eye Response element.. Some centres still use this older scale, but most (including the Glasgow unit where the original work was done) have adopted the modified one.

The scale is composed of three tests: eye, verbal and motor responses The three values separately as well as their sum are considered.. The lowest possible GCS (graded 1 in each element) is 3 (deep coma or death), while the highest is 15 (fully awake person).. A practical scale The Lancet 2 (7872): 814 The Glasgow Coma Scale: clinical application in Emergency Departments.

A peripheral pain stimulus, such as squeezing the lunula area of the person's fingernail is more effective than a central stimulus such as a trapezius squeeze, due to a grimacing effect.. Patients with scores of 3-8 are usually considered to be in a coma In these circumstances, the score is given as 1 with a modifier attached (e.. In hospitals, it is also used in monitoring patients in intensive care units Glasgow Coma Scale Chart Serial Assessments OfJennett, both professors of neurosurgery at the University of Glasgow's Institute of Neurological Sciences at the city's Southern General Hospital. e10c415e6f
